

Prograin[®]

2027

Seed Guide
EASTERN CANADA

**Grow smarter.
Harvest
stronger.**

The performance of a soybean variety begins long before it reaches the field. It starts years earlier through a sustained commitment to research and development. Backed by the largest private soybean breeding program in Canada, Prograin develops varieties tailored to the needs of growers across Eastern and Western Canada.

At Prograin's Saint-Césaire Research Centre, every stage of variety development takes place under one roof : from creating new genetic lines and conducting agronomic evaluations to laboratory genotyping and food quality testing, including tofu performance. This fully integrated approach enables faster identification of soybean varieties with outstanding yield potential, superior quality, and consistent field performance.

Innovation driving your success

As agriculture continues to evolve, so does our breeding program. Working alongside research partners, Prograin is integrating cutting-edge technologies such as genomic prediction, artificial intelligence, and drone-based imaging to accelerate the identification of superior genetics. These advanced tools enable the analysis of larger datasets with greater precision, helping us develop the next generation of high-performing soybean varieties more efficiently than ever.

your profitability**

LISKA

2400 CHU (RM 00.3) High Protein

- Excellent yield potential in its maturity group
- A healthy looking plant all season long
- Excellent appearance in the field

Management Pointers

Plant in fertile well-structured soil
Prefers seeding in narrow spacing

Row spacing (in.)

An early season, high-yielding variety that will impress

Phytophthora:
Good natural tolerance
SCN: Sensitive

Standability

1 2 3 4 5 6 7 8 9

Sclerotinia tolerance

1 2 3 4 5 6 7 8 9

Stability – adaptability

1 2 3 4 5 6 7 8 9

Vigour for no-till

1 2 3 4 5 6 7 8 9

Adaptability to 30" spacing

NR

KOA

2475 CHU (RM 00.8)

- Variety that branches and has excellent standability
- Excellent appearance in the field

Management Pointers

Good yield in high-density populations
Prefers 7" to 15" spacing
Plant in all soil types

Row spacing (in.)

Variety with impressive stability in early maturity areas

Phytophthora: Rps 1c
SCN: Sensitive

Standability

1 2 3 4 5 6 7 8 9

Sclerotinia tolerance

1 2 3 4 5 6 7 8 9

RESEARCH

Soybean breeding is at the heart of everything we do at Prograin. By combining the expertise of our people, state-of-the-art facilities, and advanced technologies, we develop high-performing soybean varieties that help growers maximize their success.

CLUB *Quali-Pro*®

Join the growers who grow excellence.

Founded in 2014, the Quali-Pro Club brings together passionate growers who share a common goal: producing exceptional conventional soybeans. Join a community that recognizes the dedication and expertise of growers who plant and harvest Quali-Pro varieties.

Grow smarter
means sharing best practices.

Harvest stronger
means reaping the benefits, together.

Quali-Pro Club Benefits

In addition to helping feed millions of people around the world, qualifying for the Quali-Pro Club gives you access to a range of exclusive benefits:

- Priority access to new soybean varieties developed by Prograin
- Recognition events and exclusive access to select Prograin events
- Technical training, profitability workshops focused on maximizing the value of Quali-Pro varieties, and much more

High Oleic Soybeans

Prograin's High Oleic soybean varieties, developed for dairy cow feed, have been genetically enhanced to contain a significantly higher proportion of **OLEIC ACID** (monounsaturated fatty acid) in their oil, ranging from 70 to 80%, compared to about 20% in conventional soybeans.

Nutritional Benefits and Impact on Dairy Production

- o **Lower levels of polyunsaturated fatty acids**, helping reduce the risk of milk fat depression, as these fatty acids can interfere with normal rumen fermentation.
- o **Higher oleic acid content**, a fatty acid that is much less disruptive to rumen function, allowing greater inclusion of soybeans in dairy rations without compromising rumen health.
- o **Improved milk fat test and increased fat yield**, with trials demonstrating higher milk fat percentages and greater kilograms of milk fat produced compared with conventional soybeans.

** The information in this document does not constitute agronomic recommendations. Talk to your nutrition advisor about including Akila HO in your ration.*

Potential for additional annual income by incorporating HO soybeans into dairy cow feed

Increase in fat production (0,1 kg / cow / day)*		
Number of cows in the herd	50	100
Additional quota produced per day	5 kg	10 kg
Additional potential annual income	36 500 \$	73 000 \$
Potential herd reduction for a same quota (average yield 1,4 kg / cow / day)	3,6 fewer cows	7,2 fewer cows

** The increase of 0.1 kg of fat per cow per day comes from the study by Weld and Armentano (2018).*

KONA HO

NEW

2750 CHU (RM 0.9) HO

- A high-oleic oil soybean variety that could be used to improve your rumen health
- Nice upright growth with stable performance
- Excellent protein source with 42%

Management Pointers

Plant in all soil types

Prefers 15 spacing

Row spacing (in.)

YOUR NON-GMO SOYBEANS COULD TAKE YOU FAR

Prograin is giving 20 growers the opportunity to experience an unforgettable adventure. The destination? That's still a secret. One thing is certain: you won't want to miss this trip.

How do you earn points?

Every unit of IP or Quali-Pro seed you purchase brings you one step closer to the next Destination IP.

Stay tuned for clues along the way. Your next destination is waiting.

To learn more and see the complete contest rules, visit prograin.ca/en/contest/ or contact your Prograin representative.

An offensive and defensive bean combined with high protein to ensure profitability on your farm!

LUMA*

NEW

2925 CHU (RM 1.5)

*Pending registration

- ✓ Offers great standability paired with the ability to branch out and fill wider rows
- ✓ Exceptional defensive package combining SCN tolerance and Rps 1c/3a for *Phytophthora* to give you peace of mind
- ✓ A maturity well suited for Southwestern Ontario growers looking to maximize yield potential and profit on their farm

Management Pointers

Plant in its relative maturity zone
Good yield at average seeding rates
Well adapted to conventional till

#1 FARMERS SHOULDN'T USE A #2 SYSTEM

Why settle for the runner-up when you could have **Roundup Ready® Xtend Crop System**, the #1 grown soybean system in Canada*? It's the only system that combines the high yield potential of Roundup Ready 2 Xtend® soybeans with built-in tolerance to both glyphosate and dicamba chemistries.

Applying the higher rate of Roundup Xtend®2 with VaporGrip® Technology in your first pass provides short-term residual activity on small-seeded broadleaves** with the added ability to effectively manage resistance concerns.

**STAY AHEAD OF WEEDS WITH THE EARLY SEASON CONTROL
OF CANADA'S #1 GROWN SOYBEAN SYSTEM.**

traits.bayer.ca >>

*Based on market research conducted by Stratus Ag Research in 2022 with Canadian soybean growers.

**Performance may vary from location to location and from year to year, as local growing, soil and weather conditions may vary. Growers should evaluate data from multiple locations and years whenever possible and should consider the impacts of these conditions on the growers' fields.

Always read and follow insect resistance management requirements (where applicable), grain marketing and all other stewardship practices and pesticide label directions. Scan the QR code or visit crops.cscience.bayer.ca/product-legal to review important stewardship and product information including regulatory status, grain marketing requirements, herbicide and insect tolerance, pesticide use and product trial results.

YOUR CALCULATION

- Row spacing: IN
- Target population: S/HA
- Seed size: S/KG
- Number of seeds per bag: S/BAG

METHOD N° 1

$$\frac{\text{S/HA}}{\text{S/BAG}} \rightarrow \text{BAGS/HA}$$

$$\frac{\text{S/BAG}}{\text{S/KG}} \rightarrow \text{KG/BAG}$$

$$\text{BAGS/HA} \times \text{KG/BAG} = \text{KG/HA}$$

METHOD N° 2

$$\frac{\text{S/HA}}{\text{S/KG}} \rightarrow \text{KG/HA}$$

CONVERSION

$$\text{KG/HA} \times 0.89 = \text{LB/AC}$$

Prograin® is a registered trademark of Semences Prograin inc. The Prograin® and Quali-Pro® logos are registered trademarks of Semences Prograin inc. Turbo-N2® is a registered trademark of Semences Prograin inc.

"Enlist E3 and the Enlist E3 logo are" ® Trademarks of Corteva Agriscience and its affiliated companies. The transgenic soybean event in Enlist E3™ soybeans is jointly developed and owned by Corteva Agriscience and M.S. Technologies L.L.C. Enlist Duo™ and Enlist™ 1 are the only 2,4-D products authorized for use with Enlist™ crops. Consult Enlist herbicide labels for weed species controlled. Always read and follow label directions. Not all herbicides are registered for sale or use in all provinces in Canada. Contact your local regulatory agency to determine if a product is registered for sale or use in your area. Always read and follow label directions.

Bayer is a member of Excellence Through Stewardship® (ETS). Bayer products are commercialized in accordance with ETS Product Launch Stewardship Guidance, and in compliance with Bayer's Policy for Commercialization of Biotechnology-Derived Plant Products in Commodity Crops. These products have been approved for import into key export markets with functioning regulatory systems. Any crop or material produced from these products can only be exported to, or used, processed or sold in countries where all necessary regulatory approvals have been granted. It is a violation of national and international law to move material containing biotech traits across boundaries into nations where import is not permitted. Growers should talk to their grain handler or product purchaser to confirm their buying position for these products. Excellence Through Stewardship® is a registered trademark of Excellence Through Stewardship.

ALWAYS READ AND FOLLOW PESTICIDE LABEL DIRECTIONS. It is a violation of federal law to use any pesticide product other than in accordance with its labeling. NOT ALL formulations of dicamba or glyphosate are approved for in-crop use with products with Roundup Ready 2 Xtend® soybeans. NOT ALL formulations of dicamba, glyphosate or glufosinate are approved for in-crop use with products with XtendFlex® Technology. ONLY USE FORMULATIONS THAT ARE SPECIFICALLY LABELED AND APPROVED FOR SUCH USES. Contact the Pest Management Regulatory Agency with any questions about the approval status of dicamba herbicide products for in-crop use with Roundup Ready 2 Xtend® soybeans or products with XtendFlex® Technology.

Products with XtendFlex® Technology contains genes that confer tolerance to glyphosate, glufosinate and dicamba. Roundup Ready 2 Xtend® soybeans contains genes that confer tolerance to glyphosate and dicamba. Glyphosate will kill crops that are not tolerant to glyphosate. Dicamba will kill crops that are not tolerant to dicamba. Glufosinate will kill crops that are not tolerant to glufosinate. Contact your Bayer retailer, refer to the Bayer Technology Use Guide, or call the technical support line at 1-888-283-6847 for recommended Roundup Ready® Xtend Crop System weed control programs.

Roundup Ready 2 Xtend®, Roundup Ready 2 Yield®, Roundup Ready® and XtendFlex® are registered trademarks of Bayer Group. Used under license. Liberty®, LibertyLink™ and LibertyLink logo® are trademarks of BASF. Used under license. Bayer CropScience Inc. is a member of CropLife Canada.
