

CROP REPORT

Season start date:

May 10th 2018

Period covered:

From May 10th to 25th

#1 - Planting Progress

WEATHER DATA (PERIOD / TOTAL SEASON)

Location	Rain	Average temperature	CHU
Western Canada 2017	214.98 mm / 1000 mm	26.4 °C / 24.4 °C	2032 / 2300
Western Canada 2018	214.98 mm / 1000 mm	26.4 °C / 24.4 °C	2032 / 2300

RAIN & DROUGHT-

The rainfall has been very sporadic across the region over this period. Moisture for seeding has been excellent and, in some areas, too wet. Thundershowers covered the region over the weekend on the 19th to 20th.

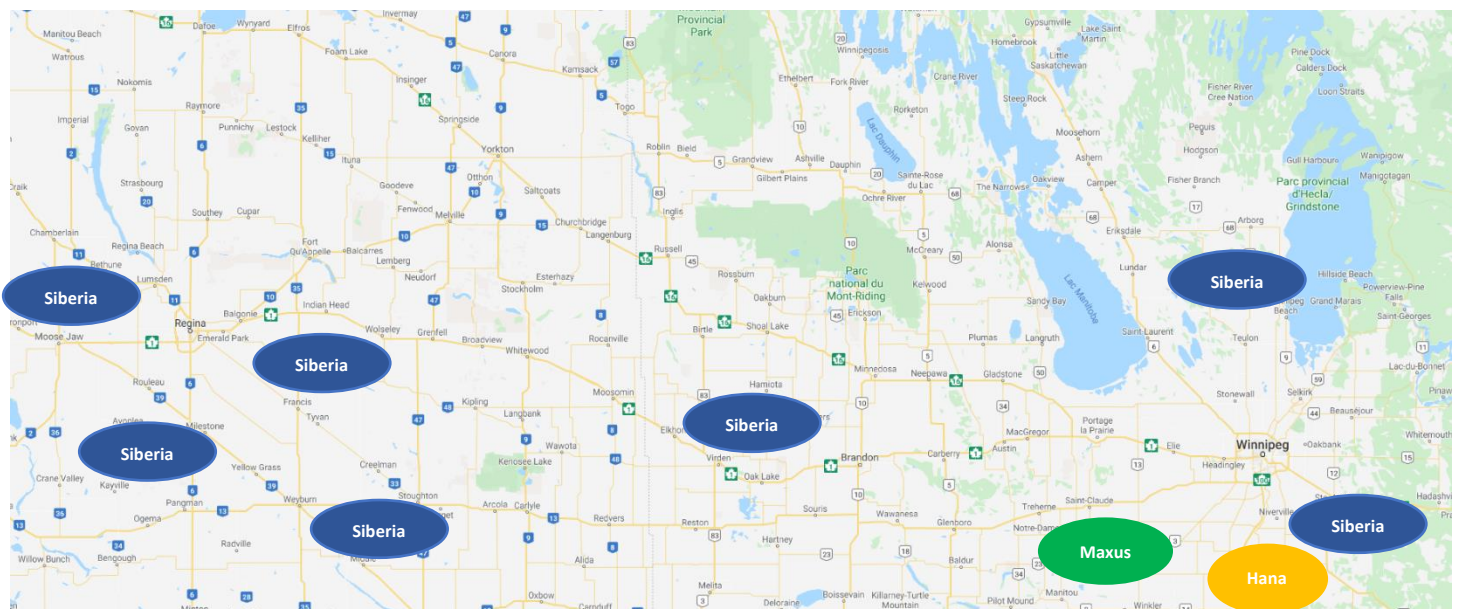

AVERAGE TEMPERATURE-

From May 10 to May 20, we experienced average to below average temperatures. After May 20, the temperatures increased drastically allowing for great soil temps for planting.

WEATHER FX ON PLANTS-

Most production was planted by May 25 and we will wait to see how some of the emergence looks. For early planted fields, the emergence will take some time but we expect emergence before June 1st in some cases.

CROP LOCATION BY VARIETY

DEVELOPMENT STAGE

CROP MANAGEMENT-

Various pre emergent chemistries will be applied during this period to help early weed control.
