48.5 mm	21.7 °C		

GLOBALLY

Soybean planting in Eastern Ontario basically started in the second week of May because growers got the spring wheat and corn done before. Soil conditions from May 9th onward became very good with warmer temperatures. At least 50% of the soybeans are in the ground as of May 16th. Soils were becoming dry but mother nature helped this with generous rainfall from Sunday May 15th to May 18th to create a great environment for what has been planted. Most of the IP soybean fields also got their first herbicide
