48.5 mm	21.7 °C	 or 	

## GLOBALLY

Soybean emergence in Eastern Ontario is extremely variable ranging from VE to V4 within a few kilometers. Some specific regions were even abandoned! Other than that, soybean populations are good to very good for a promising crop. Herbicide applications seem to work effectively this year with few resprays. Flowering on the plants is going to start any day now in good moisture conditions and moderate temperatures. Soil conditions are generally adequate for the moment with specific areas in the EXTREME wet conditions.

## DEVELOPMENT STAGE
