Good overall	24.8 °C		

## GLOBALLY

Soybean maturity is advancing well but still is behind the 3 year average. Where Soybean Aphid populations were high, there are evident damages in fields that were not treated against Soybean Aphids in August. In general, the weed control is acceptable but far from perfect and some fields will again require a pre-harvest burndown application to reduce the risks of staining the crop. Moisture conditions have been adequate giving a chance for the soybean plants to fill seeds within the pods and less abandoned seeds per pod.

## DEVELOPMENT STAGE
