

CROP REPORT #4

Season start date:
May 1st 2022
Period covered:
From May 1st to Sept 12th

LOCATION	RAIN	AVERAGE MAX	CHU
Western Ontario 2021	260-350 mm / 1000 mm	24 °C	2700-3000 to date
Western Ontario 2022	170-260 mm / 1000 mm	25 °C	2700 - 3000 to date
RAIN AND	AVERAGE MAX TEMPERATURE	WEATHER FX ON PLANTS	
Drought Conditions	25 °C in September	OK	

GLOBALLY

Harvest has begun on early planted fields and drought stressed fields. Most acres are turning colour quickly and are at the R7 stage. Pre harvest burndown applications are being timed and applied. Yield estimates and early harvested fields suggest that yield averages will be slightly lower than the 2021 crop especially in drought prone areas. Later maturing varieties may have got enough rain during key stages to have strong yields.

DEVELOPMENT STAGE
