

# CROP REPORT #5

LOCATION	RAIN	AVERAGE TEMPERATURE	CHU (Nicolet)
Québec Average	88 mm	12°C / 22°C	3402 / 3500
Saint-Hyacinthe, Québec 2021	122 mm	10.6°C / 20.5°C	3173 / 3500
RAIN AND	CHU AND AVERAGE	WEATHER FX ON PLANTS	
119.3 mm	3173 heat units - 15.5 °C	👍 or 👎	👍

## GLOBALLY

To this day, soybean is mostly completed. Harvest is around 80-90% completed. Yield is not consistent through different regions. The regions that got lots of aphid or others insects in August showed lower yield than expected. Overall yield should be the average of the last 5 years. In summary, yield is average, growers are in a better mood than last year, because they got nice condition to harvest and less weed escaped.. The 2 first week of October were sunny, windy and temperature over 15 Celsius degrees. Also because of these good conditions, they were able to harvest at 13-14% of moisture and the seed quality seem good so far.

## DEVELOPMENT STAGE

Planting done May 10th, 2022....  
Pictures taken on october 13th,  
2022... Demo trials with IP varieties
