

# CROP REPORT #5

Season start date:

May 1<sup>st</sup> 2022

Period covered:

From May 1<sup>st</sup> to Oct 14<sup>th</sup>

LOCATION	RAIN	AVERAGE MAX	CHU
Western Ontario 2021	350-450 mm / 1000 mm	20 °C	3200-3600 to date
Western Ontario 2022	200-320 mm / 1000 mm	18 °C	3100 - 3500 to date
RAIN AND	AVERAGE MAX TEMPERATURE	WEATHER FX ON PLANTS	
Dry Conditions	18 °C in September	<b>GOOD</b>	

## GLOBALLY

Harvest is approximately 70% complete with some areas being completely finished. There has only been one major rain event since the end of September that has slowed things down. The weather has been much more cooperative than last Fall and the quality of soybeans being harvested is much better. Yields have been variable due to lack of rainfall in some areas. Yields have ranged from 30-65bu/ac but majority of farmers seem happy. I expect soybean harvest to be finished up next week.

## DEVELOPMENT STAGE
