

CROP REPORT #1

Season start date:
May 1st 2023
Period covered:
From May 1st to May 19th

LOCATION	RAIN	AVERAGE TEMPERATURE	CHU
Western Ontario 2022	30-40 mm / 1000 mm	19 °C	200-240 to date
Western Ontario 2023	10-20 mm / 1000 mm	19 °C	150-200 to date

GLOBALLY

Planting has progressed well over the past 10 days. The majority of soybean acres started being planted the week of May 8th which is similar to last year. There were a few acres planted mid-April during a warm period and those acres have emerged. Some of these April planted soybeans were hit with frost this week and some of those acres will be replanted. At the start of this week there was only about 30% of soybeans planted but now I expect somewhere around 50-60% has been planted in Western Ontario. The long-range weather forecast looks like planting will easily be finished before the end of May.

DEVELOPMENT STAGE
