

CROP REPORT

Season start date:
May 1st 2023
Period covered:
From May 1st to June 30th

LOCATION	RAIN	AVERAGE TEMPERATURE	CHU
Western Ontario 2022	80-110 mm / 1000 mm	24 °C (June)	925-1100 to date
Western Ontario 2023	45-100 mm / 1000 mm	23 °C (June)	900-1100 to date

GLOBALLY

The soybean crop seems to be developing a bit slower than normal possibly due to colder temperatures. Earlier planted soybean fields have started flowering. Later planted fields will begin flowering shortly. Pre-emerge herbicides had variable effectiveness depending when they were applied due to lack of early season rainfall. Post-emerge herbicide applications are finishing up shortly. We have received many rainfall events in the last couple weeks of June. Overall, the soybean crop looks good as we head into the reproductive stages.

DEVELOPMENT STAGE
