

CROP REPORT

Season start date:
May 1st 2023
Period covered:
From May 1st to Aug 11th

LOCATION	RAIN	AVERAGE TEMPERATURE	CHU
Western Ontario 2022	150-220 mm / 1000 mm	26.6 °C	2200-2400 to date
Western Ontario 2023	215-300 mm / 1000 mm	26.4 °C	1900-2200 to date

GLOBALLY

Overall the soybean crop looks good heading into the final pod filling stages. The month of July was extremely wet here in Western Ontario with some areas having over 200mm of rain in July alone. This caused some fields to have drowned out areas as well as increased presence of root rots. We are also about 10% lower on heat units compared to average which is delaying the reproductive stages of the crops. Soybeans are much taller than they were last year due to a lot of vegetative growth but early pod counts show high yield potential if the weather cooperates and diseases don't take over.

DEVELOPMENT STAGE
