GLOBALLY

As of June 28, 2024, most soybeans across Manitoba are in V1 to V3 stages. 20% of the soybean acres were planted during the first week of June which is why we are delayed. Wet, cool weather has been the norm in June; however, soybeans are still managing well through the less-than-ideal growing conditions. Rainfalls over this period have ranged from 25 mm to 90 mm.
