

# CROP REPORT #4

**Season start date:**  
April 25<sup>th</sup> 2024

**Period covered:**  
From June 27<sup>th</sup> to august 14<sup>th</sup>

LOCATION	RAIN	AVERAGE TEMPERATURE	CHU
Eastern Quebec, 2023	115.8 mm / 1157 mm	35 °C / 2 °C	1008 / 3300
Eastern Quebec, 2024	247.9 mm / 1157 mm	24.7 °C / 15.7 °C	661 / 3300

  

RAIN AND DROUGHT	AVERAGE TEMPERATURE	WEATHER FX ON PLANTS
310 mm	20 °C	👍

The varieties that were seeded early around May 15<sup>th</sup> 2024 started the season slowly, but we are still ahead of the season by one week compared to 2023. The soybeans in general demonstrate a good vegetative growth, meaning that a good number of nods are present on each plant, which also have a good number of pods per nods. The development of pods and the filling of these pods are on the right track since water was not lacking during that period. Unfortunately in some region too much rain also caused some problems, but these are only localised thus not a major problem overall. There have been a couple of soybean fields harvested already, and these fields have shown good quality beans.

## DEVELOPMENT STAGE
