

# CROP REPORT #2

Season start date:  
May 1<sup>st</sup> 2025  
Period covered:  
From May 1<sup>st</sup> to June 26<sup>th</sup>

LOCATION	RAIN	AVERAGE TEMPERATURE	CHU
Western Ontario 2024	160-210 mm / 1000 mm	24 °C /13 °C	1100-1250 to date
Western Ontario 2025	100-120 mm / 1000 mm	23 °C/12 °C	855-955 to date

RAIN AND DROUGHT	AVERAGE TEMPERATURE	WEATHER FX ON PLANTS
120 mm	23 °C/12 °C	

**GLOBALLY**

Soybean planting finished extremely late this year as beans were still being planted mid-June. There also seems to be above average replanting due to early cold conditions, seed corn maggot pressure and crusting issues from heavy rains. Overall beans that were planted in the middle of May are at the V4-V5 crop stage and are probably going to be flowering the end of this week. With cooler temperatures in May we are at least a week behind in heat units in most parts of Ontario. However, recently we have had high temps with little rain and crops are currently stressed and in need of moisture.

**DEVELOPMENT STAGE**
