

CROP REPORT #4

Season start date:
April 25th 2025
Period covered:
From August 1st to September 2nd, 2025

LOCATION	RAIN	AVERAGE TEMPERATURE	CHU
Eastern Quebec 2024	771.8 mm / 1157 mm	25.5 °C / 14.2 °C	2895 / 3300
Eastern Quebec 2025	522 mm / 1157 mm	26.4 °C / 13.3 °C	2771 / 3300

RAIN AND DROUGHT	AVERAGE TEMPERATURE	WEATHER FX ON PLANTS
107 mm	20.3 °C	

GLOBALLY

From July 15 2025 to August 20, 2025, there was very little rainfall in Eastern Ontario and Quebec. This will lead to potential yield losses in many cases. The decrease in yield is due to pod abortion and loss of the last flowers present on the plants. Nevertheless, the fields withstood the drought fairly well ; those with heavier soils were less affected than sandy fields, which suffered more from water stress. Despite this, a quality harvest can still be expected, although yields will be lower than usual in Quebec and Eastern Ontario.

DEVELOPMENT STAGE
